**SCHEME OF EXAMINATION  
&  
SYLLABUS  
of  
M.Sc. (Microbiology) Semester Exam  
UNDER  
FACULTY OF LIFE SCIENCE  
Session 2019-21**

**(Approved by Board of Studies)  
Effective from June 2019**

*Phy*  
06/7/19

*Anty*  
06/7/19

*Chem*  
06/7/19

M. SC. MICROBIOLOGY					
Scheme of Examination and Syllabus					
July 2019 – December 2019					
FIRST Semester	Paper No.	Title of Paper	Marks		Credit
			(External)	(Internal)**	
	I*	Cell Biology	80	20	4
	II	Biomolecules	80	20	4
	III	Microbiology	80	20	4
	IV	Biology of Immune System	80	20	4
	LC-I	Lab Course I (Based on paper I & II)	80	20	2
	LC-II	Lab Course II (Based on paper III & IV)	80	20	2
		<b>Total</b>	600		
January 2020 – June 2020					
SECOND Semester	Paper No.	Title of Paper	Marks		Credit
			(External)	(Internal)	
	I	Genetics and Molecular Biology	80	20	4
	II	Bioenergetics & Metabolism	80	20	4
	III	Instrumentation and Molecular Techniques	80	20	4
	IV	Biometry, Computer and Scientometry	80	20	4
	LC-I	Lab Course I (Based on paper I & II)	80	20	2
	LC-II	Lab Course II (Based on paper III & IV)	80	20	2
		<b>Total</b>	600		
July 2020 – December 2020					
THIRD Semester	Paper No.	Title of Paper	Marks		Credit
			(External)	(Internal)	
	I	Microbial Physiology	80	20	4
	II	Fermentation Technology	80	20	4
	III	Environmental Microbiology	80	20	4
	IV	Medical Microbiology	80	20	4
	LC-I	Lab Course I (Based on paper I & II)	80	20	2
	LC-II	Lab Course II (Based on paper III & IV)	80	20	2
		<b>Total</b>	600		
January 2021 – June 2021					
FOURTH Semester	Paper No.	Title of Paper	(External)	(Internal)	Credit
	I	Microbial Biotechnology	80	20	4
	II	Advanced Immunology, diagnostics and prophylaxis	80	20	4
	III	<b>Special Paper-A:</b> Food Microbiology <b>Special Paper-B:</b> Microbial Ecology	80	20	4
	IV	<b>Special Paper-A:</b> Agricultural Microbiology <b>Special Paper-B:</b> Industrial Microbiology	80	20	4
	LC-I	Lab Course I (Based on paper I & II)	80	20	2
	LC-II	Lab Course II (Based on paper III & IV)	80	20	2
		<b>Total</b>	600		
	<b>OR</b>				
	<b>Project Work***</b>				
	Dissertation	240	60	11

	Viva-voce	80	20	03	
		<b>Total</b>	600		
		<b>Grand Total</b>	2400		

Phy 06/7/19

Ants 06/7/19

Chem 06/7/19

\*Each theory paper will have 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise.

\*\* Each student will be evaluated continuously throughout the semester. There will be a class test based on each theory paper. The full marks will be 10 for each paper. There will be a poster/oral presentation based on each theory paper. The full marks will be 10 for each presentation. Each student will be required to submit a brief write-up (not more than 10 pages) on his/her poster/oral presentation.

\*\*\*A student of IV semester will have the choice to opt for project work in lieu of four theory papers and two lab courses provided he/she secures at least **65%** or more marks in aggregate in semester I and II. The project has to be carried out in recognized national laboratories or UGC recognized universities. No student will be allowed to carry out project work in private laboratories/ college/ institutions, excluding the colleges recognized as research centers by the RDC of Pt. Ravishankar Shukla University, Raipur. The valuation of all the projects will be carried out by an external examiner and HoD of UTD or its nominee at the UTD Centre.

Scheme for Lab Course (for each Semester)		Maximum Mark 100
1	Major Exercise based on paper 1	20
2	Minor Exercise based on paper 1	10
3	Major Exercise based on paper 2	20
4	Minor Exercise based on paper 2	10
5	Spotting/ Interpretation****	10
6	Viva- voce	10
	Sub Total	80
	Sessional (Internal)	20
	Total	100

\*\*\*\*A student will be required to interpret on the displayed item/material

<b>M. Sc. Microbiology</b>
<b>FIRST SEMESTER</b>
(July 2019 – December 2019)
<b><u>PAPER I: CELL BIOLOGY</u></b>
Max. Mark 80
(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).
<b>UNIT I</b>
Molecular organization of membranes- asymmetrical organization of lipids, proteins and carbohydrates. Osmosis, ion channels, membrane pumps and electrical properties of membranes. Active transport by ATP-powered pumps: types, properties and mechanisms.
<b>UNIT II</b>
Transport of proteins into mitochondria, chloroplast and endoplasmic reticulum. Transport of proteins into and out of nucleus. Transport by vesicle formation: exocytosis, endocytosis and its molecular mechanism.

*Signature*  
06/7/19

*Signature*  
06/7/19

*Signature*  
06/7/19

<b>UNIT III</b>	
Cell signaling: Signaling via G-protein linked and enzyme linked cell surface receptors, MAP kinase pathways. Eukaryotic cell division cycle: different phases and molecular events, regulation and control of cell cycle. Apoptosis. Oncogenes and tumor suppressor genes: viral and cellular Oncogenes, retinoblastoma, E2F and p53 proteins.	
<b>UNIT IV</b>	
Organization of chromosomes: Structure of chromosomes, centromere and telomere. States of chromosomes during cell cycle. Mitotic chromosome. Organization of genes in chromosomes Banding. Pattern of chromosomes. Lampbrush and Polytene chromosomes. Chromatin, nucleosomes, DNA packaging, heterochromatin and euchromatin.	
<b>Lab Course:</b>	
<ol style="list-style-type: none"> <li>1. Study of chromosome behaviour during Mitosis and meiosis (Onion / Garlic root tips, Onionbuds, human lymphocytes, rat or bird testis /grass hopper testis or any other materials).</li> <li>2. Calculation of mitotic index in growing Onion / Garlic root tips</li> <li>3. Squash preparation: Polytene chromosome (in chironomus / Drosophila or other insect salivary gland) and Barr body (in buccal epithelial cells).</li> <li>4. Study of permanent slides.</li> <li>5. Estimation of DNA</li> <li>6. Estimation of RNA</li> <li>7. Sub-cellular fractionation and marker enzymes</li> <li>8. Identification of biomolecules in different tissues by histochemical techniques</li> <li>9. Preparation of mitotic plate by carmine squashing method and phase identification.</li> <li>10. Isolation of protoplast, measurement of cell density plating efficiency.</li> <li>11. Preparation of Karyotype of metaphase plate.</li> <li>12. Preparation of Meiotic plate and determination of phases.</li> </ol>

<b>M. Sc. Microbiology</b>	
<b>FIRST SEMESTER</b>	
(July 2019 – December 2019)	
<b><u>PAPER II: BIOMOLECULES</u></b>	
Max. Mark 80	
(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).	
<b>UNIT I</b>	
Carbohydrates: structure, classification, properties and function; derivatives of monosaccharides, homo and hetero-polysaccharides, Peptidoglycan, glycoproteins and liposaccharide. Lipids: Classification, structure and function. Nucleic Acid: Structure of purine and pyrimidine bases, nucleoside and nucleotide; DNA-structure and conformation; RNA - Structure, types and functions.	

*Chel*  
06/07/19

*Amr*  
06/07/19

*Amr*  
06/07/19

<b>UNIT II</b>
Amino acids: structure, classification and functions; Synthesis of peptides and protein sequencing. Proteins- properties, covalent structure; secondary, tertiary and quaternary structure of proteins, Ramchandran plot
<b>UNIT III</b>
Enzyme classification, coenzymes, active site of enzyme, factors contributing to the catalytic efficiency of enzyme; enzyme kinetics- Michaelis-Menten equation, determination of Km, enzyme inhibition, allosteric enzymes, isoenzymes, ribozyme, multienzyme complexes
<b>UNIT IV</b>
Chemistry of porphyrins: Importance of porphyrins in biology; structure of hemoglobin and chlorophyll porphyrins, structure and biological role of animal hormones, structure and biological role of water soluble and fat soluble vitamins.
<b>Lab Course:</b>
<ol style="list-style-type: none"> <li>1. Specific tests for sugars, amino acids and lipids</li> <li>2. Formal titration of amino acids</li> <li>3. Estimation of proteins using ninhydrin and biuret method</li> <li>4. Estimation of sugar by anthrone and Folin-Wu method.</li> <li>5. Saponification value and iodine number of fat.</li> <li>6. Estimation of ascorbic acid.</li> <li>7. Achromic point determination using salivary amylase</li> <li>8. Effect of ions on salivary amylase activity.</li> <li>9. Enzyme assay and kinetics (ex. Amylase, Protease)</li> </ol>

Zubay <input type="checkbox"/> Biochemistry by Stryer <input type="checkbox"/> Biochemistry by Garrett and Grosham <input type="checkbox"/> Text book of Biochemistry by West, Tood, Mason & Bruglen <input type="checkbox"/> Biochemistry by White, Handler & Smith <input type="checkbox"/> Biochemistry by D. Voet and J C Voet

<b>M. Sc. Microbiology</b>
<b>FIRST SEMESTER</b>
(July 2019 – December 2019)
<b><u>PAPER III: MICROBIOLOGY</u></b>
Max. Mark 80
(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).
<b>UNIT I</b>
General characteristics of fungi, classification of fungi, life cycle of selected fungal genus ( <i>Aspergillus</i> , <i>Pencillium</i> , <i>Fusarium</i> and <i>Mucor</i> ). Economic importance of fungi. Fungi and bioremediation, parasitism, mutualism and symbiosis with plants and animals. Heterothallism, sex hormone in fungi, Mycorrhiza, VAM. Algae: Distribution, classification, reproduction, ecology and importance.
<b>UNIT II</b>
Morphology and ultra structure of bacteria, morphological types, cell wall of archaebacteria, gram negative, gram positive eubacteria, eukaryotes. Cell membranes – structure, composition and properties. Structure and function of flagella, cilia, pili, gas vesicles. Cyanobacteria, protozoa, mycoplasma and Rickettsia. Gene transfer mechanisms, transformation, transduction, conjugation and transfection. Plasmids F: factors colicins and col factors, plasmids as a vector for gene cloning.

*Phd*  
06/7/19

*Arts*  
06/7/19

*Scant*  
06/7/19

**UNIT III**

Nutritional types (autotrophs, heterotrophs, phototrophs, chemotrophs), growth curves, measurement of growth, factors affecting growth, generation time, growth kinetics. Batch and continuous culture, asynchronous and synchronous culture.

Basis of microbial classification, classification and salient feature of bacteria according to Bergey's manual of determinative bacteriology, cyanobacteria, prochlorons and cyanelles.

**UNIT IV**

Viruses: Structure and classification of viruses; morphology and ultra structure; capsids and their arrangements, types of envelopes, viral genome, their types and structure, virus related agents (viroids, prions). General feature of virus reproductions, early events in virus multiplication, virus restriction and modification of host, virus mRNA. General overview of bacterial viruses, RNA and DNA bacteriophages (MS2,  $\phi$ X174, M13, T3, T4). Lysogeny and Lytic phase. General account of plant and animal viruses (TMV, HIV and other oncogenic virus, Hepatitis virus).

**Lab Course:**

1. Glassware preparation and sterilization techniques- wet heat- dry heat- filter types- laminar flow chamber types- CDC- safety levels.
2. Preparation of liquid & solid media, plating, pouring, inoculation and incubation for growth of microorganism
3. Methods of obtaining pure culture of microorganisms (a) streak plate (b) Pour plate, and (c) spread plate methods
4. Microscopic examination of the microorganisms, identification and staining methods
5. Micrometry and camera lucida drawings
6. Study of bacterial growth by turbidimetry/ spectrophotometry
7. Biomass measurement for fungi
8. Isolation and enumeration of microorganisms from soil by serial dilution agar plating method.
9. Enumeration of viruses by plaque assay technique.
10. Motility of bacteria by hanging drop technique.

**Books Recommended:**

- Microbiology: L.M. Prescott, J.P. Harley and D.A. Klein, McGraw Hill Publication.
- General Microbiology: Stanier, Ingraham, Wheelis and Painter, Mac Millan Press
- Principles of Microbiology: R.M. Atlas
- Microbiology: Peleczar, Chan & Krieg
- General Virology: Luria, Darnell, Baltimore and Campell
- Introduction to Mycology: CJ Alexopoulos and CW Mims, Wiley Eastern Ltd, New Delhi

**M. Sc. Microbiology****FIRST SEMESTER**

(July 2019 – December 2019)

**PAPER IV: BIOLOGY OF IMMUNE SYSTEM**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

**UNIT I**

Innate immune mechanism and characteristics of adaptive immune response. Cells of immune system: Hematopoiesis and differentiation, mononuclear cells and granulocytes. Antigen presenting cells. Primary and Secondary lymphoid organs and tissues. Ontogeny and phylogeny of lymphocytes. Lymphocyte traffic.

**UNIT II**

Antigen receptor molecules: B-cell receptor complex, Immunoglobulin- structure, types and function. T-cell receptor complex. Major Histocompatibility Complex- types, structural organization, function and distribution. Transplantation and Rejection. Complements in immune function.

*Pheta*  
06/7/19

*Rupin*  
06/7/19

*Dand*  
06/7/19

**UNIT III**

Antigens: nature of antigens, factor affecting immunogenicity, Haptens and super antigens. Antigenic determinants. Recognition of antigens by T and B cell. Antigen processing. Role of MHC molecules in antigen presentation and co-stimulatory signals. Antigen and antibody interaction.

**UNIT IV**

Cell mediated immune response. Cytokines and interleukins- structure and function. Immunity to infections. Hypersensitive reactions and their types. Immunodeficiency disorders. Autoimmunity

**Lab Course:**

1. Identification of cells of immune system
2. Separation of mononuclear cells by Ficoll-Hypaque
3. Identification of Lymphocytes and their subsets
4. Lymphoid organs and their microscopic organization
5. Isolation and purification of Antigens
6. Purification of IgG from serum
7. Estimation of Levels of gamma globulins and A/G ratio in blood
8. Antigen antibody interaction

**Books Recommended:**

- Kuby's Immunology: R.A. Goldsby, Thomas J Kindt and Barbara A. Osborne
- Immunology- A short Course: E. Benjamini, R. Coico and G. Sunshine
- Immunology: Roitt, Brostoff and Male
- Fundamentals of Immunology: William Paul
- Immunology: Tizard
- Immunology: Abbas *et al*

**M. Sc. Microbiology****SECOND SEMESTER**

(January 2020 – June 2020)

**PAPER I: GENETICS AND MOLECULAR BIOLOGY**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

**UNIT – I:**

Mendelian principles: Dominance, segregation, independent assortment.  
Concept of gene : Allele, multiple alleles, pseudoallele, complementation tests  
Extensions of Mendelian principles: Codominance, incomplete dominance, gene interactions.  
Mutation: Types, causes and detection, mutant types – lethal, conditional, biochemical, loss of function, gain of function, germinal verses somatic mutants, insertional mutagenesis.

**UNIT – II:**

DNA replication, repair and recombination: Mechanism of replication, enzymes involved, replication origin and replication fork, fidelity of replication, extrachromosomal replicons, DNA damage and repair mechanisms; Repair of Base-excision, Nucleotide excisions, Mismatch and Double Strand. Guardian of DNA;  $p_{53}$  and  $p_{21}$ . Homologous and site-specific recombination.

**UNIT – III:**

RNA synthesis and processing: transcription factors and machinery, formation of initiation complex, transcription activator and repressor, RNA polymerases, elongation, and termination, RNA processing, capping, RNA editing, splicing, and polyadenylation, structure and function of different types of RNA, RNA transport.

Phd  
06/7/19

Amits  
06/7/19

Paul  
06/7/19

**UNIT – IV:**

Protein synthesis and processing: Ribosome, formation of initiation complex, initiation factors and their regulation, elongation and elongation factors, termination, genetic code, aminoacylation of tRNA, tRNA-identity, aminoacyl t-RNA synthetase, and translational proof-reading, translational inhibitors, Post Translational modification of proteins. Protein targeting.

**Lab Course:**

1. Isolation, purification and estimation of RNA
2. Isolation, purification and estimation of DNA
3. Determination of T<sub>m</sub> of nucleic acid
4. Fraction of poly (A) RNA
5. Restriction Digestion
6. Ligation
7. DNA molecular size determination

**Books Recommended:**

 J Wilson and T Hunt : Molecular Biology of the Cell: The Problems  
 B Lewin : Genes VIII  
 JE Krebs *et al.* (Ed.) : Genes X (Lewin's), Jones and Bartlett Publishers, Sudbury, Massachusetts, (2011)

**M. Sc. Microbiology****SECOND SEMESTER**

(January 2020 – June 2020)

**PAPER II: BIOENERGETICS AND METABOLISM**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

**UNIT I**

First and second laws of thermodynamics. Concept of free energy, High – energy compounds, ATP cycle, structural basis of free energy change during hydrolysis of ATP. Other high – energy biological compounds

**UNIT II**

Basic concepts of intermediary metabolism. Carbohydrate metabolism: Glycolysis, Kreb's cycle, glycogenolysis, glycogenesis, pentose phosphate pathway, gluconeogenesis, and glyoxylate pathway, inborn errors of carbohydrate metabolism. Regulation of carbohydrate metabolism.

**UNIT III**

Electron transport and oxidation phosphorylation: electron carriers, Complexes I to IV, substrate level phosphorylation, mechanism of oxidative phosphorylation, Shuttle system for entry of electron, Biosynthesis and degradation of Lipids, Regulation of lipid metabolism.

**UNIT IV**

Nitrogen Assimilation. Biosynthesis of amino acids. Degradation of amino acids. Regulation of amino acid metabolism. Biosynthesis and degradation of purine and pyrimidine nucleotides.

Phd  
06/7/19

Phd  
06/7/19

Phd  
06/7/19

**Lab Course:**

1. Protein estimation by Lowry, Bradford and Spectrophotometric method
2. Estimation blood cholesterol
3. Estimation of sugar by Nelson- Somogyi and Benedict's reagent
4. Isolation and estimation of lipid from seeds and egg.
5. Estimation of inorganic and total phosphorus by Fiske-Subba Rao method
6. Assay of phosphatases in blood and seeds
7. Urease estimation in plant tissues

**Books Recommended:**

- Principles of Biochemistry by Nelson, Cox and Lehninger
- Biochemistry by G. Zubay
- Biochemistry by Stryer
- Biochemistry by Garrett and Grosham
- Text book of Biochemistry by West, Tood, Mason & Bbruglen
- Biochemistry by White, Handler & Smith
- Biochemistry by with clinical application
- Biochemistry by D Voet and J C Voet
- Enzymes by Dixon and Webb
- Fundamentals of Enzymology by Price and Steven
- Practical Biochemistry by Plummer
- Enzyme Biotechnology by G. Tripathi
- Enzyme Reaction Mechanism by Walsh.
- Enzyme Catalysis and Regulation by Hammes

**M. Sc. Microbiology****SECOND SEMESTER**

(January 2020 – June 2020)

**PAPER III: INSTRUMENTATION AND MOLECULAR TECHNIQUES**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

**UNIT I**

Centrifugation: Principle, techniques. Preparative, analytical and ultracentrifuges, sedimentation coefficient and factors affecting sedimentation coefficient. Application of centrifugation.  
Photometry: Basic principles of colorimetry, UV- visible spectrophotometry & IR- spectrophotometry.  
Spectrofluometry  
Atomic absorption spectroscopy: Principle, Instrumentation and applications  
Electrophoresis: Paper electrophoresis, Starch gel, agarose, PAGE-type, 2D-E.

**UNIT II**

Microscopic techniques: light microscopy, microscopy of living cells, scanning and transmission microscopes, different fixation and staining techniques for EM, freeze-etch and freeze-fracture methods for EM, image processing methods in microscopy  
Microtomy: types, principle and applications  
*Lyophilization*: Principle, instrumentation and applications

**UNIT III**

Chromatography: Paper and Thin Layer Chromatography. Gel filtration, Ion exchange chromatography and Affinity chromatography. Gas-liquid chromatography and HPLC.  
Histochemical and immunotechniques: Antibody generation, detection of molecules using ELISA, RIA, western blot, immunoprecipitation, flow cytometry and immunofluorescence microscopy, detection of molecules in living cells, *In situ* localization; FISH and GISH.

Phel

R. S.  
06/7/19

Q. S.  
06/7/19

#### UNIT IV

Molecular techniques: Isolation and purification of RNA, DNA (genomic and plasmid) and proteins, separation methods; RNA, DNA and proteins; 1-D and 2-D, isoelectric focusing gels; Molecular cloning of DNA and RNA fragments in bacterial systems; Expression of recombinant DNA; DNA sequencing. Gene expression; mRNA, cDNA using PCR and qRT-PCR. Micro array based techniques.

Molecular Markers for diversity analysis: RFLP, RAPD, AFLP, VNTR, SSR, ISSR, SNP, DaRT.

#### Lab Course:

- Verification of Beers Law
- Determination of absorption maxima
- Quantitative determination, Enzyme kinetics
- Amino acid and carbohydrate separation by paper and TLC
- Ion exchange and gel filtration chromatography
- SDS Polyacralamide Gel Electrophoresis
- DNA electrophoresis
- Separation of sub-cellular organelles by differential centrifugation.
- Isolation of DNA and Agarose gel Electrophoresis
- Amplification of RAPD and AFLP markers.
- Isolation of RNA and Electrophoresis of RNA on denaturing gels.
- cDNA synthesis and cloning
- Isolation of Protein and SDS-PAGE
- In vitro DNA ligation, transformation of E. coli
- Characterization of transformants: DNA gel electrophoresis, Restriction map analysis.

<b>M. Sc. Microbiology</b>	
<b>SECOND SEMESTER</b>	
(January 2020– June 2020)	
<b><u>PAPER IV: BIOMETRY, COMPUTER AND SCIENTOMETRY</u></b>	
Max. Mark 80	
(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).	
<b>UNIT I</b>	
Introduction to biostatistics. Types of biological data: data on different scales. Frequency distributions. Cumulative frequency distributions. Random sampling. Parameters and statistics. Measures of central tendency and dispersion: Mean, Median, Mode, Range, Variance and Standard deviation. Coefficient of variation. The effects of coding data. Data transformations: Log-transformation, Square-root transformation and Arcsine transformation. Distribution: normal and binomial.	
<b>UNIT II</b>	
Statistical errors in hypothesis testing. Testing goodness of fit: Chi-square goodness of fit. Heterogeneity Chi-square. The 2 x 2 contingency table. One sample hypothesis. Two- sample hypothesis. Testing for difference between two means ( <i>t</i> -test). Testing for difference between two variances ( <i>F</i> -test). The paired sample <i>t</i> -test. Multiple-sample hypothesis (ANOVA): Single factor and two factors ANOVA. Simple linear regression. Regression vs. Correlation. Regression equation. Interpretations of regression functions. Simple linear correlation. The correlation coefficient.	
<b>UNIT III</b>	
Introduction to MS-Office software: Word processing; Creating new document, Editing documents, Adding graphics to documents, Word tables. Management of Workbook & Worksheets; Applications, Features, Using formulas and functions, Features for Statistical data analysis, Generating charts/ graph. Presentation software; Working in PowerPoint, Creating new presentation, Working with slides.	
<b>UNIT IV</b>	
Introduction to Internet and Applications. Basics of internet, e-mailing, Search engine – Google and Yahoo; PubMed, Scopus, Web of Science, Google Scholar, Indian Citation Index, Science Citation Index (SCI), h-index, i-10-index. Journal Impact Factor (JIF). Introduction to Plagiarism and Cyber laws.	
<b>Lab Course:</b>	
<ol style="list-style-type: none"> <li>1. Exercises for data distribution</li> <li>2. Exercises for computation of measures of central tendency</li> <li>3. Exercises for computation of measures of variability</li> <li>4. Computation of correlation coefficient, <i>r</i>, and regression constants</li> <li>5. Data analysis by ANOVA and multiple-range tests</li> <li>6. Hypothesis testing by <i>t</i>-test, <i>F</i>-test, and Chi-square test</li> <li>7. Graphical presentation of data using a suitable package</li> <li>8. Statistical analysis of a data using a suitable package</li> <li>9. Preparation of document using a suitable package</li> <li>10. Preparation of slides using a suitable package</li> </ol>

**M. Sc. Microbiology****THIRD SEMESTER**

(July 2020– December 2020)

**PAPER I: MICROBIAL PHYSIOLOGY**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

**UNIT - I**

Aerobic metabolism of methane and methanol: Methane and methanol users, Oxidation of methane, Formaldehyde and formic acid, assimilation of C-1 compounds.

Anaerobic respiration: Sulphur compounds and nitrate as electron acceptors, electron transport in  $\text{SO}_4$  and  $\text{NO}_3$  reducers. Anaerobic metabolism of glucose, Fermentation process, modes of glucose fermentation (lactic acid, ethanol, acetic acid, butyric acid, acetone and butanol, formate and propionate). Transport of nutrients across membrane.

**UNIT - II**

Biosynthesis of peptidoglycan, teichoic acid, lipopolysaccharide, biosynthesis and degradation of essential amino acids, microbial degradation of aromatic, polycyclic and halogenated aromatic compounds. Microbial metabolism of hydrogen.

**UNIT - III**

Microbial photosynthesis: Historical account, structure of photosynthetic pigments i.e., chlorophylls and bacterio-chlorophylls, carotenoids, phycobilins, primary photochemistry and electron transport (light harvesting, charge-separation and electron transport in anoxygenic photosynthesis), ATP synthesis. Eubacterial photosynthetic microbes, development of photosynthetic apparatus, carbon metabolism. Cynobacterial organization of photosynthetic apparatus. Halobacterial photo-phosphorylation.

**UNIT - IV**

Nitrogen metabolism: Biological nitrogen fixation, Mechanism of nitrogen fixation, ammonia assimilation, properties and regulation of glutamine synthetase, glutamate synthetase, glutamate dehydrogenase. Biochemistry of methanogenesis; bio-transformation of steroid and non-steroid compounds.

*Phd*  
06/7/19

*Phd*  
06/7/19

*Phd*  
06/7/19

**Lab Course:**

1. Qualitative of assay of different extra-cellular enzymes
2. Quantitative assay of alkaline and acid phosphatases from microorganisms.
3. Determination of Km value of beta- fructofuranosidase from yeast
4. Antibiotic sensitivity test
5. Measurement of CM-cellulase by viscometric and reducing sugar method.
6. Experiment on production of enzymes and optimizing parameters for enzyme production in shake flask culture using *Aspergillus niger*, *Saccharomyces cerevisiae* for production of amylase, invertase respectively.
7. Experiment on production of citric acid and optimizing parameters for citric acid production in shake flask culture using *Aspergillus niger*.

**Books Recommended:**

1. Brown TA (1999) Genome. John Wiley & Sons (Asia) PTE. LTD.
2. Goeddel DV (1990) Methods in Enzymology, vol 185, Gene Expression Technology. Academic Press, San Diago.
3. Kaufman PB, Wu W, Kim D and Cseke LJ (1995) Molecular and Cellular Methods in Biology and Medicine. C. Press, Florida.
4. EL-Mansi E.M.T. and Bryce C.F.A. Fermentation Microbiology and Biotechnology. Taylor & Francis.

**M. Sc. Microbiology****THIRD SEMESTER**

(July 2020 – December 2020)

**PAPER-II: FERMENTATION TECHNOLOGY**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

**UNIT - I**

General Considerations: Fermentation biotechnology – An historical perspective, metabolic pathways and metabolic control mechanisms, primary and secondary metabolites, genetic regulation and catabolite repression, Fermentation kinetics, kinetics of substrate utilization, product formation.

**UNIT - II**

Types of bio-reactors, their design and instrumentation: Fed batch bio-reactors, continuous stirred tank bio-reactors, plug flow tubular reactors; multiphase reactors, packed bed, bubble column, fluidized bed and trickle bed bio-reactors, animal and plant cell bio-reactors, non-ideal mixing, batch and continuous sterilization, immobilized bio-catalysts, sensors for medium and gases.

**UNIT - III**

Industrial production of microbial biomass (SCP, and mushrooms), alcohol, organic acid (citric acid, gluconic acid, itaconic acid), amino acids (L- glutamic acid, L- lysine and L-aspartic acid), enzymes and antibiotics (Penicillin), microbial polysaccharides and polyesters.

**UNIT - IV**

Scale up, instrumentation control, Bio-sensors in bio-process monitoring and control. Downstream processing: Removal of microbial cells and solid matter, precipitation, filtration, centrifugation, disintegration of cells, extraction methods, concentration methods, purification and resolution of mixtures, drying and crystallization.

<b>M. Sc. Microbiology</b>
<b>THIRD SEMESTER</b>
(July 2020 – December 2020)
<b><u>PAPER III: ENVIRONMENTAL MICROBIOLOGY</u></b>
Max. Mark 80
(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).
<b>UNIT - I</b>
Distribution and ecology of microorganism: airspora- concepts and components, indoor and outdoor air spora, aeroallergens, Ecosystem- concept, components, food chains, food webs, and trophic levels. Energy transfer efficiencies between trophic levels. Environmental factors influencing the growth and survival of microorganism. Physical factors- temperature, light, osmotic pressure and hydrostatic pressure. Chemical factors- pH, O <sub>2</sub> and CO <sub>2</sub> . Microorganisms of extreme environments: Psychrophiles, Mesophiles, thermophiles, acidophiles, alkalophiles, halophiles and specific habitats.
<b>UNIT - II</b>
Microbiology of water: aquatic ecosystems-types- fresh water (ponds, lakes, streams) - marine (estuaries, mangroves, deep sea, hydrothermal vent, salt pans, coral reefs). Zonation of water ecosystems– upwelling-eutrophication- food chain. Drinking and potable water, ecology of polluted water, microbiological treatment processes. Waste water disposal and reclamation. Brief account of major water borne diseases and their control measures.
<b>UNIT – III</b>
Soil microbiology: Micro flora of various soil types (bacteria and nematodes): rhizosphere- phyllosphere – brief account of microbial interactions symbiosis, mutualism, commensalism, competition, amensalism, synergism, parasitism, predation, biological N <sub>2</sub> fixing organisms, symbiotic fungi, Phosphate solubilizing organisms, Ecology of litter decomposition; extracellular enzymes (hydrolases), heterotrophic potential decomposers and utilizers relationship.
<b>UNIT -IV</b>
Biodegradation of Cellulose , Lignins and hydrocarbons (superbug). Composting, treatment of solid wastes. Bioaccumulation of metals. Biodeterioration: classification of Biodeterioration of materials (monuments, paints, rubbers, plastics, fuels, lubricants, metals, stone, cosmetics, toiletries). GMO and their impact.

*Phd*

06/7/19

*Amrta*  
06/7/19

**Lab Course:**

1. BOD & COD estimation in water sample
2. Study of microbial contaminants from water and wastewater.
3. Study of air borne microorganisms using various methods.
4. Assay of anti-fungal and antibacterial properties of agro-chemicals and fungicides.
5. Assessment of quality of oils using saponification value, iodine number, and free fatty acid composition.
6. Study of thermophilic microorganisms.
7. Bacteriological examination of water by multiple-tube fermentation test.
8. Determination of coliforms to determine water purity using membrane filter method.
9. Lipase production test.
10. Isolation of Rhizobium from root nodule.
11. Measurement of spore size using micrometry
12. Isolation of microorganisms from rhizosphere and phylloplane.

**Books Recommended:**

- Michael, T. Madigan; John. M. Mmmartinko and Jack Parker. Brock. Biology of Microorganisms.
- Microbiology of Extreme Environments edited by Clive Edwards
- Olguin J. Eugenia, Sanchez Gloria & Hernandez Elizabeth. Environmental Biotechnology and Cleaner Bioprocesses. Taylor & Francis.
- Michel. R. Introduction to Environmental Microbiology. 1999

**M. Sc. Microbiology****THIRD SEMESTER**

(July 2020 – December 2020)

**PAPER-IV: MEDICAL MICROBIOLOGY**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

**UNIT - I**

Normal microbial flora of human body, role of resident flora, host microbe interactions. Classification of medically important microorganisms. Infection and infectious process - routes of transmission of microbes in the body. Source of infection for man; vehicles or reservoirs of infection. Mode of spread of infection. Pathogenesis: Infectivity and virulence.

**UNIT - II**

Classification of pathogenic bacteria. *Staphylococcus*, *Streptococcus*, *Pneumococcus*, *Neisseria*, *Corynebacterium*, *Bacillus*, *Clostridium*, Non sporing Anaerobes, Organism belonging to Enterobacteriaceae, vibrios, Non fermenting gram negative bacilli *Yersinia*; *haemophilus*; *Bordetelia*; *Brucella*; *Mycobacteria*, *Spirochaetes*, *Actinomycetes*; *Rickettsiae*, *Chlamdiae*.

**UNIT- III**

General properties of Viruses; Viruses Host Interactions, Pox viruses, Herpes viruses, Adeno viruses; Picarno viruses; Orthomyxo viruses; Paramyxo viruses; Arboviruses, Rhabdo viruses, Hepatitis viruses; Oncogenic viruses; Human Immuno deficiency viruses.

**UNIT- IV**

Mycology - Human mycotic infections caused by Dermatophytes, Histoplasma, Cryptococcus, Candida, opportunistic mycoses. Mycotoxins. Description and classification of pathogenic fungi and their laboratory diagnosis.

Parasitology - Medical importance of Entamoeba, Giardia, Plasmodium, Taenia, Ascaris, Wucherhria. Laboratory techniques in parasitology.

**Lab Course:**

Phel  
06/7/19

Amo  
06/7/19

Qant  
06/7/19

1. Identification of micro flora of mouth, skin and wounds
2. Identification of enteric pathogens by TSIA medium
3. Identification of dermatophytic fungi
4. Identification of important human parasites
5. IMVIC test/other specific tests

#### **Books Recommended:**

- Prescott & Dunn's. Microbiology. CBS Publishers & Distributors.
- Anantnarayan R and Panikar CKJ: Text book of Microbiology, Orient Blackswan Pvt. Ltd.
- Broude AI: Medical Microbiology and Infectious Diseases, WB Saunders Co.
- Chapel and Haeney: Essentials of Clinical Immunology, Blackwell Scientific Publications
- Forbes BA, Sahm DF and Weissfeld AS: Bailey & Scott's Diagnostic Microbiology, Mosby

### **M. Sc. Microbiology**

#### **FOURTH SEMESTER**

(January 2021 – June 2021)

#### **PAPER-I: MICROBIAL BIOTECHNOLOGY**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

#### **UNIT - I**

Techniques of Microbial technology: Scope of genetic engineering, restriction and modification enzymes, ligation and transformation, agarose and polyacrylamide gel electrophoresis, Southern, northern, western blotting, polymerase chain reaction, DNA sequencing, cloning vectors- plasmids, bacteriophages, phagemids, cosmids. YAC, BAC.

#### **UNIT - II**

Basics of Genomics, RNA interference, Cloning strategies, cDNA synthesis and cloning, mRNA enrichment, DNA primers, linkers, adaptors and their synthesis, library construction and screening; Cloning interacting genes, two and three hybrid systems, cloning differentially expressed genes, nucleic acid microarrays; Site directed mutagenesis and protein engineering.

#### **UNIT - III**

Microbial screening, selection and strain improvement, Optimization process, immobilization techniques Bacterial enterotoxins, peptide hormone, interferons. Biofertilizers, Biopesticides, Enzyme in pulp and paper industry, Bioremediation.

#### **UNIT - IV**

Role of national and international organization in biotechnology, cooperative efforts, government programs for biotechnology development and applications, patenting biotechnological process and products in different fields, regulation for bio-hazardous products.

#### **Lab Course:**

1. Bacterial culture and antibiotic selection media. Preparation of competent cells.
2. Isolation of plasmid DNA.
3. Isolation of Lambda phage DNA.
4. Estimation of nucleic acids.
5. Agarose gel electrophoresis and restriction mapping of DNA.
6. Construction of restriction map of plasmid DNA.
7. Cloning in plasmid/phagemid vectors.
8. Preparation of single stranded DNA template.
9. Gene expression in *E. coli* and analysis of gene product
10. PCR

**M. Sc. Microbiology****FOURTH SEMESTER**

(January 2021 – June 2021)

**PAPER-II: ADVANCED IMMUNOLOGY, DIAGNOSTICS AND PROPHYLAXIS**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

**UNIT - I**

Generation of diversity in BCR and TCR. Light and heavy chain gene recombination. Recombination Signal sequences. Heavy chain constant region genes. Class switching. Membrane and secreted immunoglobulins. Organization and arrangement of T-cell receptor genes.

**UNIT - II**

Synthesis and production of immunoglobulins. Monoclonal antibody. Designer antibody.

Regulation of immune response by antigen, antibody, immune complex, MHC and cytokines. Autoimmunity and autoimmune disorders. Immunological tolerance. Immunity to microbial and parasitic infections. Immunodeficiency diseases.

**UNIT - III**

Principles of antimicrobial action and resistance of antibiotics. Antimicrobial susceptibility testing Anti fungal and anti cancer compounds. Nosocomial infection, common type of hospital infections and their diagnosis and control.

Immunoprophylaxis: Principles of Vaccination. Immunization practices. Vaccines against important bacterial and parasitic diseases. DNA vaccines; passive prophylactic measures. Viral vaccines and antiviral agents

*Chell*  
06/7/19

*Arthy*  
06/7/19

*Paul*  
06/7/19

<b>UNIT - IV</b>
Diagnosis of microbial diseases - Collection, transport and preliminary processing of Clinical pathogens. Clinical, microbiological, immunological and molecular diagnosis of microbial diseases. Modern methods of microbial diagnosis.
Principles of immunodiagnosics. Antigen-antibody based immunodiagnosis and the techniques involved – Enzyme, Radio and Fluorescence Immunoassays, Immunoblotting, Flow cytometry. Effector cell assays, Cytotoxic assays. Isolation of pure antibody. Application of monoclonal antibodies in immunodiagnosics.
<b>Lab Course:</b>
<ul style="list-style-type: none"> <li>• Preparation of Parasite/ microbe Antigen and analysis by PAGE</li> <li>• Immunizations and Production of Antibody</li> <li>• Antigen antibody reaction by Double Diffusion, Counter Current and Immunoelectrophoresis, RID and ELISA</li> <li>• Western Blot Analysis</li> <li>• Immunodiagnosis using commercial kits</li> <li>• VDRL and RPR Test.</li> <li>• Widal test</li> </ul>

<b>M. Sc. Microbiology</b>
<b>FOURTH SEMESTER</b>
(January 2021 – June 2021)
<b><u>Special Paper - PAPER-III (A): FOOD MICROBIOLOGY</u></b>
Max. Mark 80
(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).
<b>UNIT- I</b>
Microbial flora of fresh food, grains, fruits, vegetables, milk, meat, eggs and fish. Microbiological examination of foods for their infestation by bacteria, fungi & viruses. Chemical preservatives and food additives. Factors influencing microbial growth in food- Extrinsic and intrinsic factors. Food as a substrate for micro-organism.
<b>UNIT- II</b>
Canning, processing for heat treatment - D, Z and F values and working out treatment parameters; microbial spoilage of canned foods, detection of spoilage and characterization. Mold and mycotoxin contamination of food, aflatoxins, ochratoxins, trichothenes, zearalenone, ergot mycotoxins. Role of microorganisms in beverages– beer, wine and vinegar fermentation.
<b>UNIT- III</b>
The roles of microorganisms in the food industry, positive and negative perspectives. Food-borne infections and intoxications: Bacteria and nonbacterial-with examples of infective and toxic types- <i>Brucella</i> , <i>Bacillus</i> , <i>Clostridium</i> , <i>Escherichia</i> , <i>Salmonella</i> , <i>Shigella</i> , <i>Staphylococcus</i> , <i>Vibrio</i> , <i>Yersinia</i> ; nematodes, protozoa, algae, fungi and viruses. Food borne outbreak- laboratory testing procedures; Sources and transmission of bacteria in foods: human, animal, and environmental reservoirs; cross-contamination.

Phol  
06/7/19

Amby  
06/7/19

Dand  
06/7/19

**UNIT- IV**

Prevention Measures-Food sanitation in manufacture and retail trade; Plant sanitation- Employee's Health standards-waste treatment-disposal- quality control. Government Agency and Food Safety Policy: Government Branches (FDA, CDC, USDA and how they work to control food safety), HACCP, Risk Assessment.

**Lab Course:**

1. Isolation and identification of microorganisms from fermented food, fruits, cereal grains and oil seeds.
2. Study & Isolation of micro organisms from Spoiled food Samples ,
3. Determination of quality of milk sample by methylene blue reductase test.

**Books Recommended:**

- M.R. Adams and M.O. Moss: Food Microbiology, Royal Society, Cambridge
- William, C. Frazier and Dennis C. Westhoff: Food Microbiology, Tata McGraw Hill
- Banwart GJ: Food Microbiology CBS Publishers & Distributors, New Delhi.
- Hobbs BC and Roberts D: Food Poisoning and Food Hygiene, Edward Arnold, London

**M. Sc. Microbiology****FOURTH SEMESTER**

(January 2021 – June 2021)

**Special Paper - PAPER-III (B): MICROBIAL ECOLOGY**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

**UNIT- I**

History, significance and developments in the field of microbial ecology  
Contributions of Beijerinck, Winogradsky, Kluyver, Van Niel, Martin Alexander, Selman A. Waksman, Environmental chemistry, Atmospheric pollutants, Types of wastes, The Atmosphere, Organization of life, Ecosystems.

**UNIT- II**

Microorganisms & their natural habitats  
A. Terrestrial Environment: Soil characteristics, Soil profile, Soil formation, Soil as a natural habitat of microbes, Soil microflora  
B. Aquatic Environment: Stratification & Microflora of Freshwater & Marine habitats.  
Atmosphere: Stratification of the Atmosphere, Aeromicroflora, Dispersal of Microbes  
D. Animal Environment: Microbes in/on human body (Microbiomics) & animal (ruminants) body.  
E. Extreme Habitats: Extremophiles: Microbes thriving at high & low temperatures, pH, high hydrostatic & osmotic pressures, salinity, & low nutrient levels.

**UNIT- III**

Succession of microbial communities in the decomposition of plant organic matter  
Biological Interactions  
A. Microbe–Microbe Interactions: Mutualism, Synergism, Commensalism, Competition, Amensalism, Parasitism, Predation, Biocontrol agents  
B. Microbe–Plant Interactions: Roots, Aerial Plant surfaces, Biological Nitrogen fixation (symbiotic/ nonsymbiotic - biofertilizers)  
C. Microbe–Animal Interactions: Role of Microbes in Ruminants, Nematophagus fungi, Luminescent bacteria as symbiont

**UNIT- IV**

Biogeochemical cycles an introduction  
Carbon cycle: Microbial degradation of polysaccharide (cellulose, hemicellulose, lignin, chitin)  
Nitrogen cycle: Ammonification, nitrification, denitrification & nitrate reduction. Nitrate pollution.  
Phosphorous cycle: Phosphate immobilization and phosphate solubilization  
Sulphur Cycle: Microbes involved in sulphur cycle

*Phol*  
06/7/19

*Phol*  
06/7/19

*Phol*  
06/7/19

**Lab Course:**

Analysis of soil - pH, moisture content, water holding capacity, percolation, capillary action  
Isolation of microbes (bacteria & fungi) from soil (28°C & 45°C) Isolation of microbes (bacteria & fungi) from rhizosphere and rhizoplane.  
Detection (qualitative) of the presence of enzymes (dehydrogenase, amylase, urease) in soil.  
Isolation of Rhizobium from root nodules of legumes  
Isolation of Azotobacter/Azospirillum from soil  
Isolation of phosphate solubilizers from soil

**Books Recommended:**

**M. Sc. Microbiology****FOURTH SEMESTER**

(January 2021 – June 2021)

**Special Paper - PAPER-IV (A): AGRICULTURE MICROBIOLOGY**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

**UNIT- I**

Structure and characteristic features of the following Biofertilizer organisms: Bacteria: Azospirillum, Azotobacter, Bacillus, Pseudomonas, Rhizobium and Frankia. Cyanobacteria: Anabaena, Nostoc, Fungi: Glomus, Gigaspora, Sclerocystis, Amanita, Laccaria.

Biofertilization processes - Decomposition of organic matter and soil fertility and vermicomposting. Mechanism of Phosphate Solubilization and phosphate Mobilization.

**UNIT- II**

Biofertilizers – biological nitrogen fixation – Nitrogenase enzyme – symbiotic nitrogen fixation- (Rhizobium, Frankia) – non symbiotic nitrogen fixation (Azotobacter - Azospirillum), VAM- ecto- endo-ectendo mycorrhizae and their importance in agriculture.

**UNIT- III**

Major Biogeochemical Cycles and the organisms: carbon – nitrogen - phosphorous and sulphur. Biopesticides: toxin from *Bacillus thuringiensis*, *Pseudomonas syringae*. Biological control - use of Baculovirus, protozoa and fungi.

Phall  
06/7/19

Phall  
06/7/19

Phall  
06/7/19

**UNIT- IV**

Microbial diseases of crop plants: symptoms, causal organisms and control.

Fungal diseases (Late blight of potato, Tikka disease of groundnut, red rot of sugarcane).

Bacterial diseases (bacterial blight of rice, citrus canker, Tundu disease of wheat) and

Viral diseases (Tobacco mosaic, leaf curl of papaya, yellow vein mosaic of bhindi).

**Lab Course:**

1. Isolation and enumeration of bacteria from different soil type.
2. Isolation and enumeration of fungi from different soil type
3. Preparation of Winogradsky Column to study the various soil microflora.
4. Isolation of Rhizobium from root nodules.
5. Isolation of Azotobacter from soil.
6. Isolation of Cyanobacteria from paddy field.
7. Measurement of pH of soil sample.

**Books Recommended:**

- Bagyraj and Rangasamy: Agricultural Microbiology

**M. Sc. Microbiology****FOURTH SEMESTER**

(January 2021 – June 2021)

**Special Paper - PAPER-IV (B): INDUSTRIAL MICROBIOLOGY**

Max. Mark 80

(There will be 5 questions of equal marks. First question will be based on complete syllabus with no internal choice, whereas rest questions will be unit wise).

**UNIT- I**

Introduction to industrial microbiology

Brief history and developments in industrial microbiology

Fermentation processes

Solid-state and liquid-state (stationary and submerged) fermentations; Batch, fedbatch and continuous fermentations

**UNIT- II**

Bioreactors/fermenters

Components of a typical bioreactor, types of bioreactors-Laboratory, pilot- scale and production fermenters; constantly stirred tank fermenter, tower fermenter, fixed bed and fluidized bed bioreactors and air-lift fermenter.

**UNIT- III**

Control parameters, industrially important strains, media ingredients

Measurement and control of fermentation parameters

Control and monitoring of different parameters in a bioreactor; pH, temperature, dissolved oxygen, foaming and aeration

Isolation of industrially important microbial strains

Primary and secondary screening, strain development, preservation and maintenance of industrial strains

Media and ingredients for industrial fermentations

Crude and synthetic media; molasses, corn-steep liquor, sulphite waste liquor, whey and yeast extract.

**UNIT- IV**

Down-stream Processing

Filtration, centrifugation, cell disruption, solvent extraction, precipitation and ultrafiltration, lyophilization, spray drying

*Phd*  
06/7/19

*Anurag*  
06/7/19

*Danh*  
06/7/19

**Lab Course:**

1. Microbial fermentations for the production and estimation (qualitative and quantitative) of:

- (a) Enzyme: Amylase
- (b) Amino acid: Glutamic acid
- (c) Organic acid: Citric acid
- (d) Alcohol: Ethanol
- (e) Antibiotic: Penicillin

2. A visit to any educational institute/ industry to see an industrial fermenter, and other downstream processing operations.

**Books Recommended:**
