SCHEME OF EXAMINATION
&
SYLLABUS
of
M.A. / M.Sc. (Mathematics)
Annual Exam

UNDER

FACULTY OF Science
Session 2023-24 & 2024-25

(Approved by Board of Studies)
Effective from June 2023

31.5.23 31/5/23 31-5-23

HEMCHAND YADAV VISHWAVIDYALAYA, DURG (C.G.)

Scheme of Examination

M.A. /M.Sc. Mathematics (Previous) (Code-325)

There shall be five papers in M.A./ M.Sc. (Previous) Mathematics. All are compulsory. Each theory paper (Paper I – Paper V) will have 100 Marks and divided into five units. However, there will be internal choice in each Unit. **Overall tally of marks will be 500.**

Paper	Description	**Theory**	**Practical**
I	Advanced Abstract Algebra (101	100	-
II	Real Analysis (102)	100	-
III	Topology (103)	100	-
IV	Complex Analysis (104)	100	-
V	Advanced Discrete Mathematics (105)	100	-

31.5.23 31-5-23 31/5/23

HEMCHAND YADAV VISHWAVIDYALAYA, DURG (C.G.)

DETAILS OF SYLLABUS

PAPER –I (Code-325101)

Advanced Abstract Algebra

Unit-I Groups - Normal and Subnormal series. Composition series. Jordan-Holder theorem. Solvable groups. Nilpotent groups.

Field theory- Extension fields. Algebraic and transcendental extensions. Separable and inseparable extensions. Splitting field Normal extensions. Perfect fields. Finite fields. Primitive elements. Algebraically closed fields.

Unit-II Automorphisms of extensions. Galois extensions. Fundamental theorem of Galois theory. Solution of polynomial equations by radicals. Insolvability of the general equation of degree 5 by radicals.

Unit-III Modules - Cyclic modules. Simple modules. Semi-simple modules. Schuler's Lemma. Free modules. Noetherian and artinian modules and rings-Hilbert basis theorem. Wedderburn Artin theorem. Uniform modules, primary modules, and Noether-Lasker theorem.

Unit-IV Linear transformations- Algebra of linear transformations, Singular and non-Singular transformations, characteristic roots and vectors, Matrices of linear transformations.

Canonical Forms - Similarity of linear transformations, Invariant subspaces. Reduction to triangular forms. Nilpotent transformations. Index of nilpotency. Invariants of a nilpotent transformation. The primary decomposition theorem. Jordan blocks and Jordan forms.

Unit-V Smith normal form over a principal ideal domain and rank. Fundamental structure theorem for finitely generated modules over a Principal ideal domain and its applications to finitely generated abelian groups. Rational canonical from. Generalized Jordan form over any field.

Books Recommended:

1. P.B. Bhattacharya, S. K. Jain, S.R. Nagpaul : Basic Abstract Algebra, Cambridge University press
2. I.N. Herstein : Topics in Albegra, Wiley Eastern Ltd.
3. Vivek Sahai and Vikas Bist, Algebra, Narosa Publishing House, 1999.

31.5.23 31/5/23 31/5/23

References

15. D.S. Passman, A Course in Ring Theory, Wadsworth and Brooks/Cole Advanced Books and Softwares, Pacific groves. California, 1991.

31.5.23 31-5-23 31/5/23

PAPER- II (Code - 325102)
Real Analysis

Unit-I Definition and existence of Riemann-Stieltjes integral, Properties of the Integral, integration and differentiation, the fundamental theorem of Calculus, integration of vector-valued functions, Rectifiable curves.

Unit-II Rearrangement of terms of a series, Riemann's theorem. Sequences and series of functions, pointwise and uniform convergence, Cauchy criterion for uniform convergence, Weierstrass M-test, Abel's and Dirichlet's tests for uniform convergence, uniform convergence and continuity, uniform convergence and Riemann-Stieltjes integration, uniform convergence and differentiation, Weierstrass approximation theorem. Power series, uniqueness theorem for power series, Abel's and Tauber's theorems.

Unit-III Functions of several variables, linear transformations, Derivatives in an open subset of R^n, Chain rule, Partial derivatives, interchange of the order of differentiation, Derivatives of higher orders, Taylor's theorem, Inverse function theorem, Implicit function theorem. Jacobians, extremum problems with constraints, Lagrange's multiplier method, Differentiation of integrals. Partitions of unity, Differential forms, Stoke's theorem.

Unit-IV Lebesgue outer measure. Measurable sets. Regularity. Measurable functions. Borel and Lebesgue measurability. Non-measurable sets. Integration of Non-negative functions. The General integral. Integration of Series. Reimann and Lebesgue Integrals. The Four derivatives. Functions of bounded variations.Lebesgue Differentiation Theorem. Differentiation and Integration.

Unit-V Measures and outer measures, Extension of a measure. Uniqueness of Extension. Completion of a measure. Measure spaces. Integration with respect to a measure. The L^p-spaces. Convex functions. Jensen's inequality. Holder and Minkowski inequalities. Completeness of L^p, Convergence in Measure, Almost uniform convergence.

Recommended Books:

1. Principle of Mathematical Analysis By Walter Rudin(3rd edition) McGraw-Hill, 1976, International student edition.
2. Real Analysis By H.L.Roydon, Macmillan Pub.Co.Inc.4th Edition, New York .1962.

31-5-23 31-5-23 31/5/23

PAPER-III (Code-325103)
Topology

Unit-I Countable and uncountable sets. Infinite sets and the Axiom of Choice. Cardinal numbers and its arithmetic. Schroeder-Bernstein theorem. Cantor's theorem and the continuum hypothesis. Zorn's lemma, well-ordering theorem. Definition and examples of topological spaces. Closed sets. Closure. Dense subsets. Neighborhoods. Interior, exterior and boundary. Accumulation points and derived sets. Bases and sub-bases. Subspaces and relative topology.
Alternate methods of defining a topology in terms of terms of Kuratowski Closure Operator and Neighborhood Systems.

Unit-II Continuous functions and homeomorphism. First and Second Countable spaces. Lindelof's theorems. Separable spaces. Second countability and separability. Separation axioms T_0, T_1, T_2, $T_{3\frac{1}{2}}$, T_4; their Characterizations and basic properties. Urysohn's lemma, Tietze extension theorem.

Unit-III Compactness. Continuous functions and compact sets. Basic properties of Compactness. Compactness and finite intersection property. Sequentially and countably compact sets. Local compactness and one point compactification. Stone-Cech compactification. Compactness in metric spaces. Equivalence of compactness, countable compactness and sequential compactness in metric space. Connected spaces. Connectedness on the real line. Components. Locally connected spaces.

Unit-IV Tychonoff product topology in terms of standard sub-base and its characterizations. Projection maps. Separation axioms, product spaces. Connectedness, product spaces, Compactness product spaces (Tychonoff's theorem). Countability and product spaces. Embedding and metrization. Embedding lemma and Tychonoff embedding. The Urysohn metrization theorem. Metrization theorems and Paracompactness-Local finiteness. The Nagata-Smirnov metrization theorem. Paracompactness. The Smirnov metrization theorem.

Unit-V The fundamental group and covering spaces-Homotopy of paths. The fundamental group. Covering spaces. The fundamental group of the circle and the fundamental theorem of algebra. Nets and filter. Topology and convergence of nets. Hausdorffness and nets. Compactness and nets. Filters and their convergence. Canonical way of converting nets to filters and vice-versa. Ultra-filters and Compactness.

Recommended Books:

1. Introduction to General Topology By K.D.Joshi, Wiley Eastern Ltd., 1983.
2. Topology, A First Course By James R. Munkres, Prentice Hall of India Pvt. Ltd., New Delhi,2000.

31.5.23 31-5-23 31/5/23

PAPER-IV (Code-325104)

Complex Analysis

Unit-I Complex integration, Cauchy-Goursat. Theorem. Cauchy's integral formula. Higher order derivatives. Morera's Theorem. Cauchy's inequality and Liouville's theorem. The fundamental theorem of algebra. Taylor's theorem. Maximum modulus principle. Schwarz lemma. Laurent's series. Isolated singularities. Meromorphic functions. The argument principle. Rouche's theorem Inverse function theorem.

Unit-II Residues. Cauchy's residue theorem. Evaluation of integrals. Branches of many valued functions with special reference to arg z, logz and z^a. Definitions and examples of Conformal mappings. Bilinear transformations, their properties and classifications. Spaces of analytic functions. Hurwitz's theorem. Montel's theorem Riemann mapping theorem.

Unit-III Weierstrass' factorisation theorem. Gamma function and its properties. Riemann Zeta function. Riemann's functional equation. Runge's theorem. Mittag-Leffler's theorem. Analytic Continuation. Uniqueness of direct analytic continuation. Uniqueness of analytic continuation along a curve. Power series method of analytic continuation Schwarz Reflection Principle. Monodromy theorem and its consequences. Harmonic functions on a disk. Harnack's inequality and theorem. Dirichlet Problem. Green's function.

Unit-IV Canonical products. Jensen's formula. Poisson-Jensen formula. Hadamard's three circles theorem. Order of an entire function. Exponent of Convergence. Borel's theorem. Hadamard's factorization theorem.

Unit-V The range of an analytic function. Bloch's theorem. The Little Picard theorem. Schottky's theorem. Montel Caratheodory and the Great picard theorem. Univalent functions. Bieberbach's conjecture (Statement only) and the "1/4-theorem.

Recommended Books:

31.5.23 31-5-23 31/5/23

PAPER-V (Code-325105)
Advanced Discrete Mathematics

Unit-I Formal Logic-Statements. Symbolic Representation and Tautologies. Quantifiers, Predicates and Validity. Propositional Logic. Semigroups & Monoids-Definitions and Examples of Semigroups and monoids (including those pertaining to concatenation operation). Homomorphism of semigroups and monoids. Congruence relation and Quotient Semigroups. Subsemigroup and submonoids. Direct Products. Basic Homomorphism Theorem.

Unit-II Lattices-Lattices as partially ordered sets. Their properties. Lattices as Algebraic Systems. Sublattices, Direct products, and Homomorphisms. Some Special Lattices e.g., Complete, Complemented and Distributive Lattices. Boolean Algebras-Boolean Algebras as Lattices. Various Boolean Identities. The Switching Algebra example. Subalgebras, Direct Products and Homomorphisms. Join-Irreducible elements, Atoms and Minterms. Boolean Forms and Their Equivalence. Minterm Boolean Forms, Sum of Products Canonical Forms. Minimization of Boolean Functions. Applications of Boolean Algebra to Switching Theory (using AND,OR & NOT gates). The Karnaugh Map Method.

Unit-III Graph Theory-Definition of (Undirected) Graphs, Paths, Circuits, Cycles, & Subgraphs. Induced Subgraphs. Degree of a vertex. Connectivity. Planar Graphs and their properties. Trees. Euler's Formula for connected planar Graphs. Complete & Complete Bipartite Graphs. Kuratowski's Theorem (statement only) and its use. Spanning Trees, Cut-sets, Fundamental Cut -sets, and Cycle. Minimal Spanning Trees and Kruskal's Algorithm. Matrix Representations of Graphs. Euler's Theorem on the Existence of Eulerian Paths and Circuits. Directed Graphs. In degree and Out degree of a Vertex. Weighted undirected Graphs. Dijkstra's Algorithm.. strong Connectivity & Warshall's Algorithm. Directed Trees. Search Trees. Tree Traversals.

Unit-IV Introductory Computability Theory-Finite State Machines and their Transition Table Diagrams. Equivalence of finite State Machines. Reduced Machines. Homomorphism. Finite Automata. Acceptors. Non- deterministic Finite Automata and equivalence of its power to that of Deterministic Finite Automata. Moore and mealy Machines. Turing Machine and Partial Recursive Functions.

Unit-V Grammars and Languages-Phrase-Structure Grammars. Rewriting Rules. Derivations. Sentential Forms. Language generated by a Grammar. Regular, Context-Free, and Context Sensitive Grammars and Languages. Regular sets, Regular Expressions and the Pumping Lemma. Kleene's Theorem. Notions of Syntax Analysis, Polish Notations. Conversion of Infix Expressions to Polish Notations. The Reverse Polish Notation.

Scheme of Examination

M.A. /M.Sc. Final (MATHEMATICS)

(Code-326)

There shall be five papers. Two compulsory and three optional. Each paper shall have 100 marks. Out of these five papers, the paper which has theory and practical both, the theory part shall have 70 marks and practical part shall have 30 marks. **Overall tally of marks in theory and practical will be 500.**

Paper	Description		Theory	Practical	Remark
Compulsory Papers					
I	Integration Theory & Functional Analysis (Paper code 201)		100	-	-
II	Partial Differential Equations & Mechanics (Paper code 202)		100	-	-
Optional Papers					
III	(i)	Graph Theory (Paper code 211)	100		
	(ii)	Programming in C (with ANSI Features) (Paper code 212)	**70**	**30**	For regular students only
IV	(i)	Operations Research (Paper code 221)	100	-	
	(ii)	Wavelets (Paper code 222)	100	-	
V	(i)	General Relativity and Cosmology (Paper code 231)	**100**	-	
	(ii)	Fuzzy Sets and their applications (Paper code 232)	100	-	
	(iii)	Fundamentals of Computer Science (Paper code 233)	70	**30**	For regular students only

Details of Syllabus

COMPULSORY PAPER - I

(Code-326201)

INTEGRATION THEORY AND FUNCTIONAL ANALYSIS

MAX.MARKS -100

Integration Theory:

Unit-I. Signed measure. Hahn decomposition theorem, mutually singular measures. Radon-Nikodym theorem. Lebesgue decomposition. Riesz representation theorem. Extension theorem (Caratheodory), Lebesgue-Stieltjes integral, product measures, Fubini's theorem. Differentiation and Integration. Decomposition into absolutely continuous and singular parts.

Functional Analysis :

Unit-II. Normed linear spaces. Banach spaces and examples. Quotient space of normed linear spaces and its completeness, equivalent norms. Riesz Lemma, basic properties of finite dimensional normed linear spaces and compactness. Weak convergence and bounded linear transformations, normed linear spaces of bounded linear transformations, dual spaces with examples.

Unit-III Contraction mapping theorem and its application, Banach fixed point theorem, Picard's theorem, Banach fixed point theorem as a source of existence and uniqueness theorem for integral equations, Nonlinear operator, examples convex function, epigraph, monotone mapping, α-monotone, coercive mapping duality maps.

Unit-IV. Uniform boundedness theorem and some of its consequences. Open mapping and closed graph theorems. Hahn-Banach theorem for real linear spaces, complex linear spaces and normed linear spaces. Reflexive spaces. Weak Sequential Compactness. Compact Operators. Solvability of linear equations in Banach spaces. The closed Range Theorem.

Unit-V. Inner product spaces. Hilbert spaces. Orthonormal Sets. Bessel's inequality. Complete orthonormal sets and Parseval's identity. Structure of Hilbert spaces. Projection theorem. Riesz representation theorem. Adjoint of an operator on a Hilbert space. Reflexivity of Hilbert spaces. Self-adjoint operators, Positive, projection, normal and unitary operators. Abstract variational boundary-value problem. The generalized Lax-Milgram theorem.

COMPULSORY PAPER - II

(Code-326202)

PARTIAL DIFFERENTIAL EQUATIONS AND MECHANICS

MAX.MARKS - 100

Partial Differential Equations:

Unit-I : Examples of PDE. Classification.

Transport Equation-Initial value Problem. Non-homogeneous Equation.

Laplace's Equation-Fundamental Solution, Mean Value Formulas, Properties of Harmonic Functions, Green's Function, Energy Methods.

Heat Equation-Fundamental Solution, Mean Value Formula, Properties of Solutions, Energy Methods.

Wave Equation-Solution by Spherical Means, Non-homogeneous Equations, Energy Methods.

Unit-II: Nonlinear First Order PDE-Complete Integrals, Envelopes, Characteristics, Hamilton Jacobi Equations (Calculus of Variations, Hamilton's ODE, Legendre Transform, Hopf-Lax Formula, Weak Solutions, Uniqueness), Conservation Laws (Shocks, Entropy Condition, Lax-Oleinik formula, Weak Solutions, Uniqueness, Riemann's Problem, Long Time Behaviour)

Representation of Solutions-Separation of Variables, Similarity Solutions (Plane and Travelling Waves, Solitons, Similarity under Scaling), Fourier and Laplace Transform, Hopf-Cole Transform, Hodograph and Legendre Transforms, Potential Functions, Asymptotics (Singular Perturbations, Laplace's Method, Geometric Optics, Stationary Phase, Homogenization), Power Series (Non-characteristic Surfaces, Real Analytic Functions, Cauchy-Kovalevskaya Theorem).

Mechanics

Analytical Dynamics:

Unit-III: Generalized coordinates. Holonomic and Non-holonomic systems. Scleronomic and Rheonomic systems. Generalized potential. Lagrange's equations of first kind. Lagrange's equations of second kind. Uniqueness of solution. Energy equation for conservative fields. Hamilton's variables. Donkin's theorem. Hamilton canonical equations. Cyclic coordinates. Routh's equations. Poisson's Bracket. Poisson's Identity. Jacobi-Poisson Theorem. Motivating problems of calculus of variations, Shortest distance. Minimum surface of revolution. Brachistochrone problem. Isoperimetric problem. Geodesic. Fundamental lemma of calculus of variations. Euler's equation for one dependent function and its generalization to (1) 'n' dependent functions, (ii) higher order derivatives. Conditional extremum under geometric constraints and under integral constraints.

31.5.23 31-5-23 31/5/23

Unit-IV : Hamilton's Principle. Principle of least action. Poincare Cartan Integral invariant. Whittaker's equations. Jacobi's equations. of Lee Hwa Chung's theorem. Statement of Lee Hwa Chung's theorem.

Canonical transformations and properties of generating functions. Hamilton-Jacobi equation. Jacobi theorem. Method of separation of variables. Lagrange Brackets. Condition of canonical character of a transformation in terms of Lagrange brackets and Poisson brackets, invariance of Lagrange brackets and Poisson brackets under canonical transformations.

Gravitation:

Unit-V : Attraction and potential of rod, disc, spherical shells and sphere. Surface integral of normal attraction (application & Gauss' theorem). Laplace and Poisson equations. Work done by selfattracting systems. Distributions for a given potential. Equipotential surfaces. Surface and solid harmonics. Surface density in terms of surface harmonics.

31.5.23 31-5-23 31/5/23

OPTIONAL PAPER - III
(Code-326211)
(I) GRAPH THEORY

MAX.MARKS - 100

Unit-I: Operations on graphs, matrices and vector spaces:

Topological operations, Homeomerphism, homomorphism, contractions, derived graphs, Binary operations, matrices and vector spaces : The adjacency matrix, The determinant and the spectrum, Spectrum properties, The incidence matrix, cycle space and Bond space, Cycle bases and cycle graphs.

Unit-II: Colouring packing and covering:

Vertex coverings, critical graphs, Girth and chromatic number, uniquely colourable graphs, edge-colourings, Face colourings and Beyond, The achromatic and the Adjoint Numbers. Setting up of combinational formulations, the classic pair of duals, Gallai, Norman-Rabin Theorems, Clique parameters, The Rosenfeld Numbers.

Unit-III: Perfect Graphs and Ramsey Theory:

Introduction to the "SPGC", Triangulated (Chordal) graphs, Comparability graphs, Interval graphs, permutation graphs, circular arc graphs, split graphs, weakly triangulated graphs, perpectness-preserving operations, Forbidden Subgraph orientations, Ramsey numbers and Ramsey graphs.

Unit-IV: Groups, Polynomials and Graph Enumeration:

Permutation groups, The automorphism group, graphs with given group, symmetry concepts, pseudo-similarity and stability, spectral studies of the Automorphism group. The colour polynomials, The chromatic polynomial, The bivariate colouring polynomials, co-chromatic (co-dichromatic) graphs and chromatically unique graphs, Graph Enumeration.

Unit-V: Digraphs & Networks:

Digraphs, Types of connectedness, Flows in Networks, Menger's and Konig's Theorem, Degree sequences.

31.5.23 31-5-23 31/5/23

OPTIONAL PAPER - III

(Code-326212)

Programming in C (with ANSI features)

Theory and Practical (For regular students only)

MAX.MARKS – 70

UNIT-I An overview of programming. Programming language, Classification. C Essential-Program Development. Functions. Anatomy of a "C" Function. Variables and Constants. Expressions. Assignment Statements. Formatting Source Files. Continuation Character. The Per-processor. Scalar Data Types-Declarations, Different Types of Integers. Different kinds of Integer Constants. Floating-Pint Types of Integers. Initialization. Mixing Types. Explicit Conversions-Casts. Enumeraion types. The Void Data Type. Typesets. Finding the Address of an object. Pointers.

UNIT-II Control Flow-Conditional Branching. The Witch statement. Looping. Nested Loops. The break and continue statements. The goto statement. Infinite Loops. Operators and Expressions-Precedence and Associativity. Unary Plus and Minus operators. Binary Arithmetic Operators. Arithmetic Assignment Operators. Increment and Decrement Operators. Comma Operator. Relational Operators. Logical Operators. Bit-Manipulation Operators. Bitwise Assignment Operator. Size of Operators. Conditional Operator. Memory Operators.

UNIT-III Arrays and Pointers-Declaring an Array. Arrays and Memory. Initializing Arrays. Encryption and Decryption. Pointer Arithmetic. Passing Pointers as Function Arguments. Accesseing Array Elements through Pointers. Passing Arrays as Function Arguments. Sorting Algorithms. Strings. Multidimensional Arrays. Arrays of Pointers, Pointers to Pointers.

UNIT-IV Storage Classes-Fixed vs. Automatic Duration. Scope. Global variables. The register Specifier. ANSI rules for the syntax and Semantics of the storage-class keywords. Dynamic Memory Allocation. Structures and Unions-Structures. Linked Lists. Unions, enum Declarations. Functions-Passing Arguments. Declarations and calls. Pointers to Functions. Recursion. The main Function. Complex Declarations.

UNIT-V The "C" Pre-processor-Macro Substitution. Conditional. Include facility. Line Control. Input and Output-Streams, Buffering. The <Stdio.h> Header file. Error Handling. Opening and Closing a File. Reading and writing Data. Selection an I/O Method. Unbuffered I/O Random Access. The Standard library for Input/Output.

Schedule for Practical Examination

Max. Marks : 30	**:**	**Time Duration : 3 Hrs**
Practical (two)	**:**	**20 Marks (10 Marks each)**
Viva	**:**	**5 Marks**
Sessional	**:**	**5 Marks**

"Details of Practical Work"

1. Write a program for Creating marksheet & Providing them grade.
2. Write a program for marking Pyramid of numbers.
3. Write a program for Calculatng average & standard deviation.
4. Write a program for finding sum of series (Sin, Cos, Tan).
5. Write a program for finding LCM of given numbers.
6. Write a program for numerical solution of algebraic equation using Newton Raphson method.
7. Write a program for numerical integration of function applying Simpson one-third rule.
8. Write a program for sorting and strings using selection or insertion sorting technique.
9. Write a program to find product of two Matrix of any given order.
10. Write a program for finding inverse of Matrix of any order.
11. Write a program for to create the string functions "sullen","strcpy".
12. Write a program for writing & reading data from Text file.
13. Write a program for copy one file to another using command line argument.
14. Write a program for creating & storing of book record using following structure-
    a. Book Acc No b. Name c. Title
    d. Author e. Publication f. Date of Publishing.
15. Write a program for searching a particular book from book record, sorting of book record on the basis of accno or name.
16. Write a program for applying appending, deleting & modification of book record.
17. Write a program for solving congruence equations using Chinese remainder theorem.
18. Write a program for finding GCD of given integers using Euclid algorithm.
19. Write a program for find initial basic feasible solution of the transportation problem using Vogel's Approximation Method.
20. Write a program for sequencing problem processing jobs through k machines using Optimal sequence Algorithm.
21. Write a program for finding shortest path of a network using Dijkstra's algorithm.
22. Write a program for finding minimum spanning tree of a network problem using Kruskal's algorithm.
23. Write a program for find maximum flow through a network using MFP Algorithm.

31.5.23 31-5-23 31/5/23

OPTIONAL PAPER - IV

(Code-326221)

(I) OPERATIONS RESEARCH

Max. Marks. 80

Unit-I Operations Research and its Scope. Necessity of Operations Research in Industry. Linear Programming-Simplex Method. Theory of the Simplex Method. Duality and Sensitivity Analysis. Other Algorithms for Linear Programming-Dual Simplex Method. Parametric Linear Programming. Upper Bound Technique. Interior Point Algorithm. Linear Goal Programming.

Unit-II Transportation and Assignment Problems.
Network Analysis-Shortest Path Problem, Minimum Spanning Tree Problem.
Maximum Flow Problem. Minimum Cost Flow Problem, Network Simplex Method. Project Planning and Control with PERT-CPM.

Unit III Dynamic Programming - Deterministic and Probabilistic Dynamic programming.
Game Theory-Two-Person, Zero-Sum Games. Games with Mixed Strategies.
Graphical, Solution. Solution by Linear Programming.
Integer Programming- Branch and Bound Technique.

Unit-IV Queuing system: Deterministic Queuing system, probability distribution in Queuing, Classification of Queuing models, Poission Queuing system ((M/M/I): (∞/FIFO), (M/M/I): (SIRO), (M/M/I): (N/FIFO). Inventory control: The concept of EOQ, Deterministic inventory problem with no shortages.

Unit-V Nonlinear Programming-One and Multi-Variable Unconstrained Optimization. Kuhn-Tucker Conditions for Constrained Optimization. Quadratic Programming. Separable Programming. Convex Programming. Non -convex Programming.

31/5/23 31.5.23 31-5-23

OPTIONAL PAPER - IV

(Code-326222)

WAVELETS

MAX.MARKS – 100

Unit-I. Preliminaries-Different ways of constructing wavelets- Orthonormal bases generated by a single function: the Balian-Low theorem. Smooth projections on $L^2(R)$. Local sine and cosine bases and the construction of some wavelets. The unitary folding operators and the smooth projections. Multiresolution analysis and construction of wavelets. Construction of compactly supported wavelets and estimates for its smoothness. Band limited wavelets.

Unit-II. Orthonormality. Completeness. Characterization of Lemarie-Meyer wavelets and some other characterizations. Franklin wavelets and Spline wavelets on the real line. Orthonormal bases of piecewise linear continuous functions for L^2 (T). Orthonormal bases of periodic splines. Periodization of wavelets defined on the real line.

Unit-III. Characterizations in the theory of wavelets-The basic equations and some of its applications. Characaterizations of MRA wavelets, low-pass filters and scaling functions. Non-existence of smooth wavelets in H^2 (R).

Unit-IV. Frames - The reconstruction formula and the Batian-Low theorem for frames. Frames from translations and dilations. Smooth frames for $H^2(R)$.

Unit-V. Discrete transforms and algorithms-The discrete and the fast Fourier transforms. The discrete and the fast cosine transforms. The discrete version of the local sine and cosine bases. Decomposition and reconstruction algorithms for wavelets.

31.5.23 31-5-23 31/5/23

OPTIONAL PAPER - V

(Code-3262231)

(I) GENERAL RELATIVITY AND COSMOLOGY

MAX.MARKS – 100

Unit-I:General Relativity-Transformation of coordinates. Tensors. Algebra of Tensors. Symmetric and skew symmetric Tensors. Contraction of tensors and quotient law. Reimannian metric. Parallel transport. Christoffel Symbols. Covarient derivatives, intrinsic derivatives and geodesies.

Unit-II: Riemann Christoffel curvature tensor and its symmetry properties. Bianchi identities and Einstein tensor.

Review of the special theory of relativity and the Newtonian Theory of gravitation. Principle of equivalence and general covariance, geodesic principle, Newtonian approximation of relativistic equations of motion. Einstein's field equations and its Newtonian approximation.

Unit-III: Schwarzschild external solution and its isotropic form. Planetary orbits and anologues of Kepler's Laws in general relativity. Advance of perihelion of a planet. Bending of light rays in a gravitational field, vitational redshift of spectral lines. Radar echo delay.

Energy-momentum tensor of a perfect fluid. Schwarzschild internal solution. Boundary conditions. Energy momentum tensor of an electromagnetic field. Einstein-Maxwell equations. Reissner-Nordstrfim solution.

Unit-IV: Cosmology Physical Universe - Mach's principle, Einstein modified field equations with cosmological term. Static Cosmological models of Einstein and De-Sitter, their derivation, properties and comparison with the actual universe.

Hubble's law. Cosmological principles. Weyl's postulate. Derivation of Robertson-Walker metric. Hubble and deceleration parameters. Redshift. Redshipft versus distance relation. Angular size versus redshift relation and source counts in Robertson-Walker space-time.

Unit-V: Friedmann models. Fundamental equations of dynamical cosmology. Critical density. Closed and open Universes. Age of the Universe. Matter dominated era of the Universe. Einstein-deSitter model. Particle and even horizons.

Eddington-Lamaitre models with l-term. Perfect cosmological principle. Steady state cosmology.

OPTIONAL PAPER - V

(Code-326232)

(II) FUZZY SETS AND THEIR APPLICATIONS

MAX.MARKS – 100

UNIT-I Fuzzy sets-Basic definitions, n-level sets. Convex fuzzy sets. Basic operations on fuzzy sets. Types of fuzzy sets. Cartesianm products. Algebraic products. Bounded sum and difference, t-norms and t-conorms. The Extension Principle- The Zadeh's extension principle. Image and inverse image of fuzzy sets.

UNIT-II Fuzzy numbers. Elements of fuzzy arithmetic. Fuzzy Relations and Fuzzy Graphs-Fuzzy relations on fuzzy sets. Composition of fuzzy relations. Min-Max composition and its properties. Fuzzy equivalence relations. Fuzzy compatibility relation. Fuzzy graphs. Similarity relation.

UNIT-III Fuzzy relation equations. Possibility Theory-Fuzzy measures. Evidence theory. Necessity measure. Possibility measure. Possibility distribution. Possibility theory and fuzzy sets. Possibility theory versus probability theory.

UNIT-IV Fuzzy Logic-An overview of classical logic, Multivalued logics, Fuzzy propositions. Fuzzy quantifiers. Linguistic variables and hedges. Inference from conditional fuzzy propositions, the compositional rule of inference. Approximate Reasoning-An overview of Fuzzy expert system. Fuzzy implications and their selection. Multiconditional approximate reasoning. The role of fuzzy relation equation.

UNIT-V An introduction to Fuzzy Control-Fuzzy controllers. Fuzzy rule base. Fuzzy inference engine. Puzzification. Defuzzification and the various defuzzitication methods (the cetre of area, the cetre of maxima, and the mean of maxima methods). Decision Making in Fuzzy Environment-Individual decision making. Multiperson decision making. Multicriteria decision making. Multistage decision making. Fuzzy ranking methods. Fuzzy linear programming.

OPTIONAL PAPER - V

(Code-326233)

(III) FUNDAMENTALS OF COMPUTER SCIENCE

(Theory and Practical)

(For regular students only)

MAX.MARKS – 70

Unit I. Object Oriented Programming-Classes and Scope, nested classes, pointer class members; Class initialization, assignment and destruction;

Unit-II. Overloaded functions and operators; Templates including class templates; class inheritance and subtyping, multiple and virtual inheritance.

Unit-III. Data Structures-Analysis of algorithms, q, W, 0, o, w notations; Lists, Stacks, and queues: Sequential and linked representations; Trees: Binary tree- search tree implementation, B-tree (concept only); Hashing-open and closed; Sorting: Insertion sort, shell sort, quick-sort, heap sort and their analysis.

Unit IV. Database Systems-Role of database systems, database system architecture; Introduction to relational algebra and relational calculus; SQL-basic features including views; Integrity constraints; Database design-normalization upto BCNF.

Unit V. Operating Systems-User interface, processor management, I/O management, memory management, concurrency and Security, network and distributed systems.

31.5.23 31-5-23 31/5/23

Practical based on the paper FUNDAMENTALS OF COMPUTER SCIENCE
Schedule for Practical Examination

Max.Marks : 30	**Time Duration** 3 **Hrs**
Practical (two)	**20 Marks (10 Marks each)**
one from each section	
Viva	**5 Marks**
Sessional	**5 Marks**

"Details of Practical Work"

Section-A

CPP PROGRAM

1. Write a program that perform push, pop and display operations into stack.
2. Write a program that perform insert, delete and display operations into queue.
3. Write a program that convert any expression into reverse polish notation.
4. Write a program that perform addition, subtraction and Transpose operations into Matrix.
5. Write a program that performs addition of sparse matrix.
6. Write a program that perform sorting of link list.
7. Write a program for creating Binary search tree and perform Inorder, Preorder and postorder traversing operation.
8. Write a program for reverse of link list
9. Design a template for sorting different data type.
10. Write a program for selection sort.
11. Write a program for merging.
12. Write a program for insertion sort.
13. Write a program for bubble sort.
14. Write a program for Merge sort.
15. Write a program for quick sort.
16. Write a program for Heep sort.

Section-B

OPERATING SYSTEM COMMANDS –

1. Use various option of Is Commands
2. Use the commands pwd, cd, rmdir, mkdir and mv commands.
3. Use command chmode.
4. Write a shell script for display fabonacci series of number
5. Write a shell script of find out factorial of given no.
6. Write a shell script for checking palindrome.

31.5.23 31-5-23 31/5/23

RDBMS Assignment -

1. Create the following table
   i) Employee (fname varchar) (15), Iname varchar (15), ssn Char (9), Bdate, Address Varchar (20), sex char, salary Decimal (10,2), superssn char (9), Dno int).
   ii) Department (Dname varchar (15), Dnumber int, Mrgssn Char (9), Mgrstardatedate)
   iii) Project (Pnumber int, pName Varchar (15), Plocation varchar (15), Dnum Int)
   iv) Works_on (essn char (9), Pho integer, Howrs decinal (4,1)
   v) Dependent [Essn Chov (9), Dependent-name varchar (15), sex char, Bdata date, Relationship varchar (8)]
2. Alter table employee and add one field job varchar (12).
3. Use insert command to insert data in above table.
4. REtrieve the Birthdata and address of employee whose name is John B. Smith.
5. Retrieve the name and address of all employee whow works for the 'Research' Department.
6. Write the name of employees whose address in University Campus (like function).
7. Find all the employees who were born during the 1950s.
8. Write the name of employees whose salary is between 10,000 to 20,000.
9. Retrieve the name of each employee who has a dependent with the same first name and same sex as the employee.
10. Retrieve the name of employee who have no dependent.
11. Find the sum of the salaries of all employees, the maximum salary and the minimum salary.
12. Find the sum of the salaries of all employees of the 'Research' department as well the maximum and minimum salary.
13. Retrieve the department number the no. of employee in each department and their aggregate salary.
14. Write query to delete all the employee whose name start with the character 'a'.
15. Use command commit rollback
